

Work Breakdown Structure – WBS

Instructions

Using the template provided with this assignment, develop a work breakdown structure (WBS) for your project.

Your WBS should include the following:

Contain a hierarchy of groupings similar to what is shown in Figures 6.3 – 6.5.

Create a numbering/coding system for the WBS that accounts for all layers of the hierarchy (See Chapter 6 – Figure 6.8)

At the work package/task level identify the following:

- Number each work package
- Provide a description of the work package and the work to be completed
- Identify the individual or generic resource responsible for completing the work (an individual would be someone specific (Sally Smith). A generic resource would be a specific role (Senior Developer)
- Identify all other resources (human, material or financial)
- Estimate per-unit costs of resources (hourly, daily, per unit, etc.)
- Estimate the time required to complete the work (use days only)

Break the project down only to the level of detail necessary for its complexity

- Assignable to a single person
- Necessary to track individually
- Can be assigned resources and costs

Add Academic Integrity Statement to worksheet tab labeled accordingly.

Add last name into file name when submitting.
